+91-9193045327 | shristyv.edu | [linkedin.com/in/shristy](https://www.linkedin.com/in/shristy) | github.com/shristy

Results-driven Full-Stack Developer with 2+ years of experience building scalable web applications using React.js, Node.js, and Express.js. Skilled in developing responsive frontends, robust APIs, and managing MongoDB databases. Experienced in cloud deployment on AWS and DigitalOcean, with strong knowledge of authentication, Git version control, and clean coding practices. Passionate about delivering efficient, high-quality solutions and continuously learning new technologies.

EDUCATION

Chaudhary Charan Singh University
(BCA) Bachelor of Computer Applications

Meerut, UttarPradesh

TECHNICAL SKILLS

Programming Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3
Frontend Development: React.js, Next.js, Tailwind CSS, Responsive UI Design, Cross-Browser Compatibility
UI Libraries & Frameworks: Bootstrap, Material UI, Ant Design
Backend Development: Node.js, Express.js, RESTful API Development
Databases: MongoDB, Firebase (Firestore, Realtime Database)
Authentication & Security: JWT, Bcrypt, Role-Based Access Control (RBAC), Secure API Practices
Cloud & Deployment: AWS (S3, SNS, Elastic Beanstalk, IAM), DigitalOcean, Application Deployment & Hosting
Version Control: Git, GitHub, Branching Strategies
Developer Tools: VS Code, Postman, PuTTY, npm, ubuntu, Debugging & API Testing Tools
AI-Assisted Development: Prompt Engineering, Code Generation & Optimization, Debugging Assistance, GitHub Copilot, ChatGPT, Cursor, Antigravity, openAI, RAG, LLM

EXPERIENCE

Nodejs Developer

Mar 2025 – Present

ITIO Innovations Pvt. Ltd.

- Backend Development (**Node.js** **Express.js**): Designed and optimized **RESTful APIs** for high-volume fintech applications, ensuring low-latency data processing and secure client-server communication.
- Frontend Development **React.js**: Collaborated on building interactive, responsive UIs for fintech dashboards, enabling real-time data visualization and seamless user experience.
- Database Data Handling: Managed **MongoDB** schemas for transactional data, implementing aggregation pipelines and indexing strategies to enhance query performance.
- Security Compliance: Implemented JWT-based authentication, role-based access control (RBAC), and encryption mechanisms to meet financial industry security benchmarks.
- Cross-Functional Collaboration: Worked closely with product managers, QA teams, and stakeholders to deliver reliable, scalable fintech solutions under strict deadlines.

Full Stack Developer

Jan 2024 - Feb 2025

Silverwink Institute of E-development and Training Center

- Backend Development: Designed and implemented scalable server-side applications using **Node.js**, **Express.js** and **RESTful APIs**, ensuring robust and efficient communication between the client and server.
- Database Management: Developed and maintained complex MongoDB schemas to handle dynamic data structures, enabling seamless data storage, retrieval, and real-time updates.
- Cloud Integration: Utilized **AWS services** such as **S3**, **Elastic Beanstalk**, and **SNS** to manage cloud-based deployments, secure file storage, and domain routing for high-performance applications.
- Security and User Management: Implemented secure authentication systems with role-based access control, ensuring data protection and tailored access for internal and external users.

Full Stack Intern

Aug 2023 - Dec 2023

Silverwink Institute of E-development and Training Center

- Designed and implemented end-to-end features using the MERN stack **MongoDB**, **Express.js**, **ReactJS**, **Node.js**, **Firebase**, **AWS**, ensuring functionality, scalability, and responsiveness.
- Developed and integrated **RESTful APIs** while optimizing database performance with MongoDB to support seamless data flow.
- Worked closely with cross-functional teams to debug, enhance UI/UX, and deliver high-quality web applications under tight deadlines.
- Implemented secure **user authentication and authorization** using JWT and bcrypt, improving data security and access control.
- Deployed and maintained applications on **AWS EC2** and managed storage with **S3**, ensuring smooth production-level performance.

PROJECTS

Quick Cash Web Platform | *Node.js, Express.js, MongoDB, React, TypeScript, Sumsb, AWS* | **Live**

- * Implemented secure **user authentication and authorization** using **JWT** with refresh tokens, ensuring reliable session management and protection against unauthorized access.
- * Integrated **KYC verification** workflows, supporting both **automated (Sumsb API)** and **manual review processes** to ensure compliance with regulatory standards.
- * Developed modules for **fiat account creation** and **crypto wallet generation** using third-party APIs, enabling seamless management of multiple currencies.
- * Built services to handle **wallet and fiat transactions**, including deposits, withdrawals, and transfers with proper validation and error handling.
- * Designed and implemented **invoice payment functionality**, allowing users to generate, send, and track payments efficiently.
- * Created **user profile management** features with customizable account settings and activity monitoring.
- * Followed a **microservices architecture**, deploying and managing services with **PuTTY** on cloud servers to ensure scalability and modularity.
- * Developed secure and optimized **RESTful APIs** to enable smooth integration between client applications and backend services.

Crypto Exchange Web Platform | *Node.js, Express.js, MongoDB, React, TypeScript, JWT, Digital Ocean* | **Live**

- * Implemented secure authentication and authorization using **JWT access tokens** with **refresh token** rotation stored in httpOnly cookies, session tracking, and role-aware API protection.
- * Built **KYC** submission flows with document upload and verification status lifecycle, supporting admin review workflows for compliance-oriented onboarding.
- * Integrated **Fireblocks** for custodial wallet operations including vault accounts, asset wallet creation, and deposit or withdrawal flows tied to user profiles.
- * Developed wallet and transaction models for multi-asset balances, locks for trading and P2P, and Stripe and **Razorpay** payment flows for fiat on-ramp and order settlement.
- * Delivered spot and derivatives-related trading experiences using **Binance market APIs** and **client-side charting**, with order and balance logic synchronized to wallet state.
- * Shipped **OpenAPI-backed REST services** documented with Swagger UI, plus a separate Chat Support microservice using Express, MongoDB, Socket.io, JWT, rate limiting, and input sanitization.
- * Built the customer-facing app with **React**, **TypeScript**, and **Vite**, using **Axios** for REST integration and Socket.io for real-time features aligned with the backend.
- * Added security-focused capabilities including password hashing, optional **two-factor authentication** patterns, and hardened middleware on auxiliary services.
